## Medical Precautions

1. Physical activities involving regular repeated movements of the wrists, hands and/or fingers may possibly cause repetitive stress injury. Such injury may also affect muscles in the arms, wrists, hands, fingers, shoulders and neck, chest and abdomen, and the legs and back.
2. There have been reports that some people may experience epileptic symptoms or even seizures while concentrating on flashing lights. It is possible that persons with no previous epileptic experiences may, nevertheless, have an undetected condition. To avoid a possible medical problem, if you have an epileptic condition, consult your physician before playing video games or any other visually intensive software products.

To avoid either of these situations, and as sound practice, if you should use this equipment for an extended period of time, it is suggested that you take periodic breaks of 10-15 minutes each hour. Unit should be used in a brightly lit room. Operating in a close distance to the TV should be avoided. In any event, stop using the Interactive Multiplayer and consult your physician if you detect involuntary muscle movements (such as twitching), altered vision, mental or visual confusion, convulsions, muscular pain, numbness of fingers, palms or other areas.
